

Since 1996, SpaceCAD Ltd., [part of DAVID Holding Co.](#), delivers software solutions and engineering services to manufacturing companies, looking for competitive edge through innovations and efficient workflow processes. We are working closely with these, who aspire to be leaders by building a sustainable engineering environment for higher contracts win ratio, shorter times to market, efficient production process and lower production cost.

SpaceCAD is long term partner of [SIEMENS PLM Software](#) for implementing the digital processes for design and manufacturing companies - incl. design, simulation and CAM manufacturing through digital twins and Internet of Things (IoT).

SpaceCAD was appointed as of SIEMENS top partner for Central and Eastern Europe (CEE) for 2010, 2014, and 2018.

The range of our solutions includes solutions and services based on SIEMENS NX, Solid Edge, Teamcenter and Tecnomatix.

The major industries SpaceCAD working with are defence, machine building, heavy machinery & transportation, tooling and mechatronics.

The [list of our customers](#) includes more than 150 companies, such like ABB, Ceratizit, Voest Alpine, SKF, Standard Profile, Reichle and De Massari, Saigon Ship Industry, Thales Rail Signalling and many others.

In 2016, SpaceCAD started 3D metal print line of business to develop, present and promote the additive manufacturing through 3D printing process in partnerships with 3D Systems, USA.

An essential part of our activity is the provision of on-demand engineering service for:

- Product design
- Simulation
- Process optimization
- Quality management
- 3D print production of metal parts "on demand"
